

# Is it time for a Medical Alert System?

Which of these questions applies to you or someone you are caring for?

- Live alone or left alone for extended periods by caregiver?
- Alone for extended periods of time?
- Have at least one chronic illness (heart disease, stroke, diabetes, pulmonary issues, osteoporosis, arthritis)?
- Feel nervous to be alone due to a medical concern or feel unsafe in your living environment?
- Use mobility assisted devices (walker, cane, crutches, wheel chair)?
- Require assistance performing activities of daily living (walking, bathing, toileting, dressing, preparing meals, etc.)?
- Physical or sensory impairments (vision, hearing, walking, etc.)?
- History of falls or medical emergencies?
- Hospitalized within last 12 months?
- History of medication management problems?

If you checked 2 or more, it's time for a medical alert system.

BROUGHT TO YOU BY:

## choosing the right medical alert system

Only select UL approved products to ensure safety and reliability.

Investigate if the response center specializes in medical monitoring.

Compare pricing, features, service policies, contract commitments and cancellation clauses.

Make sure the system is easy to use.

Is the monitoring center available 24 hours a day, 7 days a week for both emergency signals and service issues?

Does the company provide nationwide monitoring service?

What is the average response time?

What kind of training does the monitoring center's staff receive?

Does the company have a back-up monitoring center?

Does the monitoring company manufacture the product?
